

F Veillez suivre scrupuleusement les consignes de sécurité et d'installation et conserver ce manuel pour toute référence.

- Le produit a été adapté pour répondre à toutes les normes de sécurité européennes et nationales en matière d'installation électrique (Réglementation sur la basse tension 2006/95/CE) et de compatibilité électromagnétique. (EMC) (2004/108/CE).
- En cas de doute sur l'utilisation de ce produit, demandez conseil à un membre du personnel qualifié ou retournez à votre point de vente. Toujours suivre les mesures de sécurité requises : dans certains pays, la garantie sera annulée si le client ne suit pas les instructions de sécurité.
- Veuillez faire une demande électrique primaire d'après les instructions et installez par un électricien professionnel.
- Ne jamais débrancher une ampoule avec une clé de fer, il devra être relié à une prise adaptée à une terre.
- Avant d'installer le produit, toujours couper l'arrivée de courant principal !
- Ce produit ne doit jamais être modifié ni converti au risque de mettre en danger la sécurité de ce produit. La garantie sera nulle et non avenue si ce produit n'est pas utilisé comme préconisé dans le manuel.

Conditions d'installation et de réglage pour éclairage 240 V.

- L'installateur électrique doit être équipé à un électricien qualifié conformément aux normes de sécurité courantes.
 - Coupez le courant pour pouvoir travailler en toute sécurité.
 - Connectez la terre pour connecter le fil de terre. Reliez le fil principal au câble joint : C12 et respectez les codes couleur : (N) Brun ou (L) Jaune/Verte (terre).
 - Si ce produit possède un fil moulé avec une clé de fer, il devra être relié à une prise adaptée à une terre.
 - Si le produit est en métal, il faut toujour brancher le fil de terre. Si vous reliez cet éclairage métallique à un support métallique, celui-ci devra être relié à la terre ou au fil de terre de l'installation électrique.
- Spécifications techniques et consignes en fonction du modèle.**
- Lisez attentivement l'ensemble des détails techniques de votre produit. Reportez-vous aux pictogrammes du guide de l'utilisateur du produit que vous venez d'acquérir.
 - Grâce à ces explications des pictogrammes. Ne sont importants pour vous que les codes figurant sur la fiche des consignes spéciales prévues pour votre modèle.
- P14 Ce produit ne peut contenir qu'à un résistant électrique de 220/240 V.
- P15 Clause de protection : 1: le produit est équipé d'une perte de terre pour garantir la protection.
- P5 Le produit et la connexion bénéficiant du niveau de protection 2 : le câble est pourvu d'une double isolation et ne pourra pas être relié à une prise de terre.
- C11 Assurez-vous que le fil de terre soit plus long que les fils électriques.
- C12 Attention ! N'effectuez pas de percer de fils électriques ou autres dans le mur ou le plafond pendant l'installation !
- C13 Les fils électriques ne doivent jamais être agrafés ou tordus entre le produit et la surface d'installation.

- C14 Les fils électriques ne doivent jamais être agrafés ou tordus entre le produit et la surface d'installation.
- Conditions d'installation et de réglage pour éclairage 240 V.**
- P14 Ce produit est modifié pour être conforme à l'ensemble des normes de sécurité et de protection contre les chocs électriques. Il est recommandé d'utiliser un appareil de protection contre les chocs électriques.
- P15 Clause de protection : 1: le produit est équipé d'une perte de terre pour garantir la protection.
- P5 Le produit et la connexion bénéficiant du niveau de protection 2 : le câble est pourvu d'une double isolation et ne pourra pas être relié à une prise de terre.
- C11 Assurez-vous que le fil de terre soit plus long que les fils électriques.
- C12 Attention ! N'effectuez pas de percer de fils électriques ou autres dans le mur ou le plafond pendant l'installation !
- C13 Les fils électriques ne doivent jamais être agrafés ou tordus entre le produit et la surface d'installation.
- C14 Les fils électriques ne doivent jamais être agrafés ou tordus entre le produit et la surface d'installation.

Put the following safety and assembly instructions to proper use, and keep this manual in a safe place:

1. This product is modified to fit all European and national safety rules regarding electrical equipment (Low voltage guidelines 2006/95/EG) and electric magnetic compatibility. (EMC) (2004/108/EG).

2. When in doubt about how to use this product ask a specialized worker for help or return to the point of sale. Always follow the required safety measures. In some countries it is the law that lighting is installed by a qualified electrician.

3. All your existing junctions must be functioning according to the current existing regulations. The lamp can NOT be connected to a malfunctioning or unsuitable junction.

4. Before installing this product, always make sure you turn off the electricity using the main switch!

5. This product may never be altered or converted; every alteration or technical change can jeopardize the safety of this product. Every application other than as described in the manual can lead to hazards situations. In the case the suretyship will expire.

Installation regulatory/requirements 240 Volt.

P14 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!

C14 Electrical installation/wires may never be clamped or twisted between the armature and the mounting surface.

C15 This armature is only suitable to hook up to the 220/240 Volt electricity grid.

P15 Protection clause 1: the armature is equipped with earth terminals, so make sure the armature is grounded. Connect the earth (green/yellow) to the right plug (marked with an earth-icon).

P5 The plug has two pins for the ground and the connection is protection level 2: the netwire is double isolated and can not be hooked up to an earth wire.

C11 Strip the wire as indicated on the icon.

C12 Make sure that the earthwire is always longer than electrical carrying wires.

C13 Pay attention! Make sure that during the montage of the armature no electrical wires and such get pierced in the wall or ceiling!
